Cloud Security and AI Test Engineer | Compliance-as-Code | Multi-Cloud DevSecOps | Terraform | Python

PROFESSIONAL SUMMARY

Cloud Security, DevSecOps, and Cloud Engineering professional with 8+ years of experience designing, automating, validating, and operating secure AWS, Azure, and GCP-aligned cloud environments. Strong hands-on background in Compliance-as-Code, Infrastructure as Code, Terraform, Python automation, CI/CD, IAM, networking, logging, monitoring, audit readiness, and cloud security controls. Experienced building automated validation routines for cloud policies, creating positive/negative/edge test cases, embedding compliance checks into GitHub Actions and DevSecOps workflows, and producing traceable documentation for security, risk, and governance teams. Certified in AWS, Azure, Kubernetes, CCNP, and CCNA with strong communication, Jira/Confluence documentation, and cross-team delivery skills.

TECHNICAL SKILLS

Cloud Platforms: AWS, Azure, GCP, EC2, VPC, IAM, S3, RDS/PostgreSQL, DynamoDB, Lambda, API Gateway, Route 53, CloudWatch, X-Ray, Systems Manager, Secrets Manager, ECR, ECS, EKS, Azure Monitor, Azure Policy, Azure ML concepts, Azure AI Search concepts, Azure OpenAI concepts

Cloud Security & Compliance: Compliance-as-Code, DevSecOps, policy validation, IAM/RBAC, least privilege, encryption, secrets management, network segmentation, private connectivity, audit evidence, NIST, ISO 27001, SOC 2, STIG-aligned controls, banking-style security governance

Policy-as-Code & IaC: Terraform, CloudFormation, ARM templates, YAML, JSON, HCL, Rego/OPA concepts, HashiCorp Sentinel concepts, GCP Org Policy concepts, Wiz Policy concepts, Kubernetes policy enforcement concepts, Helm concepts

Automation & Testing: Python, Bash, PowerShell, automated test frameworks, positive testing, negative testing, exception and edge-case testing, mock cloud environments, test suite libraries, traceability matrices, remediation validation

CI/CD & DevSecOps: GitHub Actions, GitHub Workflows, Jenkins, Azure DevOps, Git, GitHub Copilot, security gates, Terraform scanning, automated compliance validation, rollback and release controls

Monitoring, Reporting & Audit: CloudWatch, Prometheus, Grafana, ELK, Azure Monitor, SonarQube concepts, Wiz.io concepts, Splunk concepts, Dynatrace concepts, AppOmni concepts, dashboards, alerts, logs, compliance reports

Collaboration Tools: Jira, Confluence, architecture diagrams, runbooks, control documentation, risk notes, handoff guides, stakeholder communication

PROFESSIONAL EXPERIENCE

BeSpoke Labs | Cloud Security / Senior DevSecOps Engineer

Dec 2025 - Present

- Design, build, and operate secure AWS cloud infrastructure using VPC, EC2, IAM, S3, RDS/PostgreSQL, DynamoDB, Lambda, API Gateway, CloudWatch, Systems Manager, Secrets Manager, Route 53, ECS/EKS patterns, and segmented network architectures.
- Automate and validate cloud security controls using Terraform, CloudFormation, Python, Bash, YAML, and HCL, improving repeatability of compliance checks across development, staging, and production environments.
- Develop policy validation logic and test cases for cloud resource configurations, including positive, negative, exception, and edge-case scenarios for IAM, networking, storage, logging, encryption, and controlled administrative access.
- Embed automated compliance checks into CI/CD workflows with GitHub Actions and Jenkins, helping teams detect insecure Terraform changes before deployment and improving DevSecOps release governance.
- Implement secure access patterns for internal systems, including private subnets, jump-host/bastion access, SSH restriction, VPC endpoints, NAT routing, controlled security group rules, and least-privilege IAM policies.
- Create traceable security documentation, architecture diagrams, runbooks, validation artifacts, Jira tickets, Confluence-style notes, and handoff guides for security architects, developers, and Cloud Service Owners.
- Improve audit readiness by documenting security control behavior, failure conditions, access paths, remediation steps, monitoring coverage, and operational evidence for internal reviews and risk assessments.
- Build monitoring and detection coverage with CloudWatch, X-Ray, Prometheus, Grafana, ELK, dashboards, alerts, logs, health checks, and runbooks, reducing incident MTTR by 60% through clearer diagnostics.
- Collaborate with security, network, development, and delivery teams to troubleshoot policy failures, review IAM and network access patterns, support authentication/authorization workflows, and stabilize platforms under changing requirements.

Real Genius LLC | Cloud Infrastructure / DevSecOps Engineer

Jun 2022 - Oct 2025

- Operated AWS and Azure-aligned infrastructure supporting web applications, APIs, CI/CD systems, operational tooling, and production environments with a focus on security, reliability, compliance, and repeatable deployments.
- Standardized Infrastructure as Code with Terraform, CloudFormation, ARM-style templates, YAML, and JSON, reducing environment provisioning time from 2 days to approximately 15 minutes while improving control consistency.
- Built CI/CD pipelines using GitHub-based workflows, Jenkins, and Azure DevOps, increasing deployment frequency by 300% while adding automated validation, safer release gates, rollback practices, and release visibility.
- Automated security and configuration validation using Python and shell scripting for Linux services, cloud resources, environment variables, TLS settings, access rules, logs, deployment outputs, and application health checks.
- Supported cloud networking requirements across private subnets, DNS, routing, security groups, firewall rules, load balancing concepts, VPN-style access patterns, and connectivity troubleshooting for application teams.
- Implemented centralized logging and monitoring through ELK, Prometheus/Grafana, CloudWatch-style monitoring, alerts, and dashboards, reducing average time to debug production issues by 70%.
- Created operational documentation, runbooks, release notes, incident notes, Jira updates, and stakeholder handoff materials to improve traceability between requirements, implementation decisions, validation results, and production evidence.
- Partnered with developers and infrastructure stakeholders to review deployment risks, validate configuration drift, troubleshoot CI/CD failures, and recommend secure remediation steps before production releases.

SELECTED CLOUD SECURITY AND COMPLIANCE PROJECTS

- AWS Multi-Tenant SaaS Authentication and API Platform:** Designed a secure AWS platform using API Gateway, Cognito/JWT authorization concepts, Lambda CRUD APIs, DynamoDB tenant isolation, S3 tenant storage, CloudWatch/X-Ray observability, IAM controls, and API Gateway usage plans for tenant-level control and rate limiting.
- Private Subnet Access and NAT/SSM Connectivity Pattern:** Built secure private access architecture using private subnets, route tables, NAT routing, Systems Manager access, VPC endpoints, security group restrictions, and controlled administrative access without broad public SSH exposure.
- Terraform DevSecOps Validation Pattern:** Built reusable Terraform deployment and validation workflows that check cloud networking, IAM, environment separation, monitoring, and secure access assumptions before promotion to higher environments.
- Compliance Evidence and Reporting Workflow:** Created documentation templates, dashboards, logs, runbooks, and validation checklists that map cloud controls to implementation evidence, failure conditions, remediation steps, and audit-ready handoff artifacts.

CERTIFICATIONS

AWS DevOps Engineer - Professional | AWS Solutions Architect - Associate | Azure Administrator Associate | CKA | CCNP ENCOR | CCNA R&S

EDUCATION

Conestoga College - Diploma in Computer Systems Technician and IT | University of Lagos - B.Sc. Electrical and Electronics Engineering
